PROFILE

Computer Systems Engineering undergraduate at Brunel (Year 3) and a working software engineer at Afryx Labs. I take things from requirement to running system: Python/FastAPI and Next.js/Supabase apps, Odoo automations, and embedded work on Raspberry Pi and microcontrollers. **Right to work in the UK; willing to relocate UK-wide. Seeking professional experience in software, systems or embedded engineering (placement, internship or part-time).**

EXPERIENCE

Software Engineer — Afryx Labs | Hybrid

Jun 2026 – Present

- Own the frontend and login flow of a multi-tenant school platform built as a Next.js / TypeScript / Supabase monorepo, working to a written authentication and theming specification alongside a distributed team.
- Moved per-school branding (logos, colour schemes) out of hardcoded values into per-institution configuration, and built a school-selector step for users with access to more than one institution.
- Ship schema changes as versioned migrations through CI/CD rather than editing production; debug environment and network issues across Windows, Docker and Linux.

Odoo Developer Intern — ST Digital | Douala, Cameroon

Jul – Aug 2025

- Built Odoo 17 modules in Python/PostgreSQL for contact centralisation and event-invitation automation, **cutting event marketing workload by around 50%**.
- Automated Microsoft Partner Centre price imports with scheduled actions, removing manual entry; contributed to code reviews and technical analysis reports.

IT Assistant — Fondation Révélation Sainte Thérèse | Yaoundé, Cameroon

Jun – Sep 2024

- Installed a fingerprint attendance system for 20+ teachers, replacing a paper register.
- Built and maintained the school website and campus network; **monthly visits rose from roughly 20 to 150**.

Also: Heathrow Engineering Insights Week (Aug 2026) • AirEx Technologies Future Ready programme (2025).

SELECTED PROJECTS

School Uniform Sales & Stock Management System — specification author and delivery lead

2026

- Wrote the full specification for a bilingual (FR/EN) sales and inventory system: role model (stock manager, viewer, developer), a complete audit trail of who changed what, generalised item types and printable receipts.
- Contracted and managed two freelance developers against a phased plan with acceptance criteria and deadlines; **Phase 1 shipped to production on Vercel**, with the stock system following in its own repository.

FRST Timetable Management System — FastAPI, SQLite, JavaScript

2026

- Built a school timetabling system with a four-level admin hierarchy, tag-based permissions, audit logging and a staged approval gate; GitHub Actions auto-deploys main.

AI-Assisted Security Scanner — Python — defensive, own systems only

2026, ongoing

- Scanner that checks HTTPS and security headers, finds exposed admin panels and secrets, tests access control, and risk-rates findings into a plain-English report.

Traffic Sign Recognition on Raspberry Pi — TensorFlow Lite, OpenCV — Brunel EE1643

2025

- Deployed a CNN to a Trilobot for real-time navigation; improved detection in varied lighting via data augmentation.

EDUCATION

Brunel University London — BEng (Hons) Computer Systems Engineering

2024 – 2028

Year 2: 2:1 average — Microcontroller Group Design Project (A+) | Computer Architecture (A) | Object-Oriented Programming (A)

Year 3: Embedded Systems | Applied AI & ML | AI Systems | Autonomous Systems Design | Individual Project

Year 1: Introductory Programming for Engineers (A*) • **Gordonstoun** — A-levels in Mathematics, Chemistry and Physics (2022 – 2024)

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript / TypeScript, SQL, Verilog, HTML/CSS

Frameworks & data: FastAPI, Next.js, Supabase, PostgreSQL / MySQL / SQLite, TensorFlow & TFLite, OpenCV, PyQt, Odoo, REST APIs

Tools & platforms: Git / GitHub, GitHub Actions, Docker, Linux, Vercel, VS Code, Quartus, OrCAD / PSpice, Fusion 360; Raspberry Pi, Arduino, ST Nucleo

ADDITIONAL

TryHackMe Pre-Security (Aug 2026), Jr Penetration Tester path • Fluent in English and French • Piano Grade 5
